Prefabricated galvanized bending villa elevator special frame

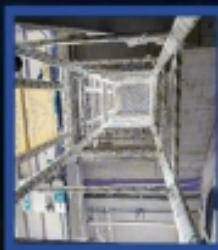

- Factory-produced, quality assured
- Hot-dip galvanization provides rust protection for 50 years
- Uses 40MM pillars, enhancing the utilization of the well shaft
- No cavity noise
- On-site assembly, simple and efficient installation process, bolted connections are pollution-free
- Can meet the one-time installation requirements of elevators and frames

INTRODUCTION**

Docking professional construction safety
protection in stages

Elevator steel structure special shaft

Steel structure shaft can be used for sightseeing elevator and non-sightseeing elevator, the use of hot-dip galvanized square pipe, material specifications according to the site size design, higher than brick wall space utilization, strength, is installed in the middle of the stairs to do the elevator choice; Non-tourist, steel structure exterior decoration is generally closed with wood + gypsum board, and then decorated on the gypsum board; Sightseeing process is more complex, generally need to paint, wall wrapping (process);

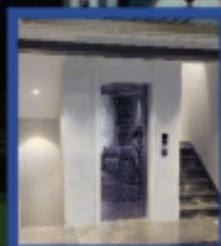

Brick and concrete elevator shaft

Brick-concrete elevator shafts are generally reserved for developers or owners do their own brick-concrete shafts, but often the brick-concrete shafts reserved by developers do not meet the civil requirements of elevator installation, such as the height of the ring beam, the door without intel and other problems, requiring a professional elevator project manager to dock with the civil construction on site;

Generally, the following contents need to be rebuilt:

1. Add a ring beam or channel steel between the floor beams according to the requirements of the elevator drawing;
2. Door height and door limit shall be changed according to elevator drawing;
3. The main beam shall be added according to the requirements of the drawing.
